

The Abstract's Title Should Be Descriptive and Unique

I.M. Author and M. Too

The extended abstracts that we accept for the Semiconductor Interface Specialists Conference should follow this general format. Because the SISC is intended for the presentation of new material, ***work that has appeared in print prior to the submission deadline will not be considered for presentation.*** For lack of a better topic, this abstract discourses on the format and the conference itself. The abstract should make a clear distinction between background material and new work, and should include enough information to show how the work advances the state of the art. While giving examples is not a particularly unique idea, our implementation is slightly different than what has been done elsewhere.¹ This abstract, ***with the proper format intended for publication in the Abstract Book***, was produced using MS Word[®] and rendered into PDF format using Adobe Acrobat[®]. References² are placed at the end of the abstract using the “endnote” feature in Word. In this version, ***the identities of the authors are disclosed in the title area and references for the printed abstract book.***

The abstracts should be original work, and summarized in two pages or less, including figures and references. The text type font must be in Times New Roman and Symbol fonts that are **11-point or larger**. The text on each 8.5” × 11” page must remain within 1” margins. No more than 6 figures may be used, with 2-4 figures being ideal. The figures must be large enough to be read easily and caption fonts may be **no smaller than 10 point**. Examples are given on the following page.

This example is formatted for 8.5” × 11” paper, which is standard in the US. Since all abstracts are to be submitted electronically, please setup the page so that it is Letter (8.5 × 11 in.) size, and all margins are 1.0”. All accepted abstracts will be printed onto this type of paper for printing and binding of the final Book of Abstracts, so the format is very important.

Figure 1. Fabricated data illustrating the shift in popular topics at the SISC. Any similarity between this and actual history is coincidental. Figures must reproduce well in black&white in the SISC Abstract book.

As was done last year, abstracts will be submitted **electronically**. To minimize the size of your electronic file, take care to paste figures in a suitable format using your word processor, such as a Windows Meta File (WMF), JPEG or TIFF. Converted PDF files should be ≤ 2 MBytes. Further instructions are given at the SISC web site at <http://www.ieeesisc.org>.

Typically about 60 papers are accepted at the SISC. The topics of such papers have varied over the years, as shown in the fabricated example for a figure, viz. Figure 1. The figure caption fonts are smaller (10 points), and the figures must reproduce well in **black&white** for the program book. As shown in this example, a figure may be inset in a paragraph, so the space on each page may be efficiently utilized. However, this is

not required. Figures may be grouped at the end, as shown with the fabricated Figures 2 and 3, or inserted between paragraphs (not illustrated). Of course, the inset paragraph idea works best if there is enough text to fill up the space opposite the table.

For your amusement, we have fabricated other sets of data to demonstrate an abstract with three figures. You may use up to six figures, but this significantly limits the available text space. The data in Figures 2 and 3 reflect a personal opinion on what makes SISC such a great conference. The technical content of the papers are highly educational, and give insight and a new perspective. But, the people of the conference are truly outstanding and the social functions allow interaction with the greatest and best in this field.

In conclusion, please use this example abstract to set the formatting of your abstract as you would like it to appear in the Abstract Book. This document was created in MS Word, Letter (8.5 × 11 in.) with 1 in. margins using New Times Roman and Symbol 11 pt. Fonts, then converted to a PDF file via the Adobe software.

Favorite Aspect of SISC
